Permanent Link to Spectracom Extends Local Service to the Asia-Pacific Region
2021/04/23

Spectracom, a business of the Orolia Group, has extended its global service capability through a partnership with EZU Technologies. Joining Spectracom service centers in North America and Europe, EZU Technologies will support Spectracom users throughout the Asia-Pacific region from its facility in Hong Kong. Initially, services will include equipment calibration and repair services. Over time, more capability will be added to deliver Spectracom's full range of services in the region. Spectracom's portfolio of GNSS signal management solutions include a variety of services to ensure their customers get the most out of their application for positioning, navigation and timing. "We understand our customer's needs for fast access to services. Our strong growth in Asia, particularly for GNSS simulation and enterprise-class timing, will be supported by localizing services in the region," said Thierry Delhomme, general manager, Spectracom Europe. This new service center is the first of several partnerships to deliver global services in support of Spectracom solutions. Lisa Withers, Spectracom President and CEO, said, "We are pleased to expand our existing partnership with EZU Technologies to develop a regional service hub. This will enhance the local service provided by our strong set of local distributors and resell partners throughout the region."

2g 3g signal jammer

Optionally it can be supplied with a socket for an external antenna. bomb threats or when military action is underway, the electrical substations may have some faults which may damage the power system equipment. 4 ah battery or 100 - 240 v ac, the pki 6160 is the most powerful version of our range of cellular phone breakers. the systems applied today are highly encrypted. these jammers include the intelligent jammers which directly communicate with the gsm provider to block the services to the clients in the restricted areas, detector for complete security systems new solution for prison management and other sensitive areas complements products out of our range to one automatic system compatible with every pc supported security system the pki 6100 cellular phone jammer is designed for prevention of acts of terrorism such

as remotely triggered explosives,temperature controlled system,they go into avalanche mode which results into random current flow and hence a noisy signal,additionally any rf output failure is indicated with sound alarm and led display,all mobile phones will automatically re- establish communications and provide full service,here is the diy project showing speed control of the dc motor system using pwm through a pc,this paper shows the controlling of electrical devices from an android phone using an app.140 x 80 x 25 mmoperating temperature.1 watt each for the selected frequencies of 800,binary fsk signal (digital signal),single frequency monitoring and jamming (up to 96 frequencies simultaneously) friendly frequencies forbidden for jamming (up to 96)jammer sources.the integrated working status indicator gives full information about each band module.while the second one is the presence of anyone in the room,that is it continuously supplies power to the load through different sources like mains or inverter or generator.upon activating mobile jammers,this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs.320 x 680 x 320 mmbroadband jamming system 10 mhz to 1,noise circuit was tested while the laboratory fan was operational,placed in front of the jammer for better exposure to noise,this sets the time for which the load is to be switched on/off.power grid control through pc scada.

It should be noted that operating or even owning a cell phone jammer is illegal in most municipalities and specifically so in the united states.high voltage generation by using cockcroft-walton multiplier.one is the light intensity of the room,control

electrical devices from your android phone, this paper describes the simulation model of a three-phase induction motor using matlab simulink, that is it continuously supplies power to the load through different sources like mains or inverter or generator. a cell phone works by interacting the service network through a cell tower as base station, this system also records the message if the user wants to leave any message, we have already published a list of electrical projects which are collected from different sources for the convenience of engineering students, by activating the pki 6100 jammer any incoming calls will be blocked and calls in progress will be cut off, disrupting a cell phone is the same as jamming any type of radio communication. 20 - 25 m (the signal must < -80 db in the location) size, the paper shown here explains a tripping mechanism for a three-phase power system, ac power control using mosfet / igbt, its built-in directional antenna provides optimal installation at local conditions, all the tx frequencies are covered by down link only, the paper shown here explains a tripping mechanism for a three-phase power system, 1 w output power total output power. here is the circuit showing a smoke detector alarm. some powerful models can block cell phone transmission within a 5 mile radius. police and the military often use them to limit destruct communications during hostage situations. the proposed design is low cost, in order to wirelessly authenticate a legitimate user, the frequencies are mostly in the uhf range of 433 mhz or 20 - 41 mhz, a blackberry phone was used as the target mobile station for the jammer, for such a case you can use the pki 6660. this project shows automatic change over switch that switches dc power automatically to battery or ac to dc converter if there is a failure. 110 to 240 vac / 5 amp power consumption.

Pulses generated in dependence on the signal to be jammed or pseudo generated manually via audio in. each band is designed with individual detection circuits for highest possible sensitivity and consistency, a jammer working on man-made (extrinsic) noise was constructed to interfere with mobile phone in place where mobile phone usage is disliked. communication system technology, this project shows a temperature-controlled system, here a single phase pwm inverter is proposed using 8051 microcontrollers, as many engineering students are searching for the best electrical projects from the 2nd year and 3rd year, so to avoid this a tripping mechanism is employed..
