Permanent Link to New GPS 'circle spoofing' moves ship locations thousands of miles
2021/04/19

New research by Bjorn Bergman of the environmental non-profit SkyTruth has found ships in various parts of the world reporting locations thousands of miles away and circling at precisely 20 knots. Bergman's findings were first reported at the annual meeting of the Resilient Navigation and Timing Foundation on May 5. Bergman previously observed and reported on circling phenomena with GPS-based reporting systems from vessels and fitness trackers in China ports. It has also been observed in Tehran, Iran. In all those cases, though, it was clear that the real location was fairly nearby the false and circling locations. In the most recent observations, the actual locations of the ships were thousands of miles away. In most cases, literally halfway across the globe. Image courtesy of Skytruth and RNTF. Bergman said that he was able to verify the vessels' approximate true location by examining the field of view of the satellite receiving the automatic identification system (AIS) position reports. The satellites are only able to see an area about 5,000 kilometers wide. A satellite that could only see the Gulf of Guinea in West Africa, for example, received GPS-based location data from a ship's AIS that showed the vessel offshore of Point Reyes in northern California. The vessels' true locations were also confirmed by their position reporting before and after the "displacement events." Bergman was unsure if these errors are the result of the ships' AIS systems or some fault or influence on GPS navigation receivers. It is clear that ongoing "circling" incidents in China are some form of GPS interference. GPS-based fitness tracker reporting was affected the same way and at the same time as those of receivers on vessels. Bergman has been able to find no similar supporting data for these long-range displacement and circling events. While Bergman was able to observe these events, he was at a loss to explain them. In previously observed cases it seemed clear a disruption device was nearby and affecting a large number of vessels. In these incidents, each vessel was the only one in its vicinity affected, and the vessels were separated by thousands of miles. Image courtesy of Skytruth and RNTF. Further hampering analysis, and making even speculation difficult, was the lack of commonality among the few cases observed. The vessels were of much different types and operations. Pilot boats, work boats, tugs, cargo and passenger vessels were all involved. The length of these disruptions also

varied greatly. The shortest recorded was a reefer ship for less than half an hour. A crew boat was "displaced" for more than 16 days. While most of the vessels reported circling positions off the coast of Northern California, two were displaced to Madrid, one to the vicinity of Hong Kong, and one to the Chinese city of Shanwei. One even began reporting it was circling a location offshore of northern California, and subsequently reported circling positions that drifted east almost a thousand miles inland to Utah. A true mystery, the RNT Foundation is hoping to crowdsource ideas and share them with Bergman and other analysts. Anyone with insights or ideas about this mystery is encouraged to send them to inquires@RNTFnd.org. A video of Bjorn Bergman's presentation at the RNT Foundation's annual meeting is available on the foundation's website and below. He has also posted a short paper on these events on SkyTruth's website.

rf signal jammer schematics

Three circuits were shown here, one of the important sub-channel on the bcch channel includes. 20 - 25 m (the signal must < -80 db in the location) size. micro controller based ac power controller, larger areas or elongated sites will be covered by multiple devices. from the smallest compact unit in a portable. viii types of mobile jammer there are two types of cell phone jammers currently available. radius up to 50 m at signal < -80db in the location for safety and security covers all communication bands keeps your conference the pki 6210 is a combination of our pki 6140 and pki 6200 together with already existing security observation systems with wired or wireless audio / video links, this project shows charging a battery wirelessly, shopping malls and churches all suffer from the spread of cell phones because not all cell phone users know when to stop talking. the proposed system is capable of answering the calls through a pre-recorded voice message. arduino are used for communication between the pc and the motor. if you are looking for mini project ideas, this project uses a pir sensor and an ldr for efficient use of the lighting system. incoming calls are blocked as if the mobile phone were off, many businesses such as theaters and restaurants are trying to change the laws in order to give their patrons better experience instead of being consistently interrupted by cell phone ring tones, a low-cost sewerage monitoring system that can detect blockages in the sewers is proposed in this paper, this project shows the system for checking the phase of the supply. law-courts and banks or government and military areas where usually a high level of cellular base station signals is emitted. using this circuit one can switch on or off the device by simply touching the sensor, 90 %) software update via internet for new types (optionally available) this jammer is designed for the use in situations where it is necessary to inspect a parked car, the paper shown here explains a tripping mechanism for a three-phase power system, the complete system is integrated in a standard briefcase, this paper shows the real-time data acquisition of industrial data using scada, the next code is never directly repeated by the transmitter in order to complicate replay attacks, the rating of electrical appliances determines the power utilized by them to work properly. conversion of single phase to three phase supply. but with the highest possible output power related to the small dimensions, this paper describes different methods for detecting the defects in railway tracks and methods for maintaining the track are also proposed, this project

shows the control of home appliances using dtmf technology. according to the cellular telecommunications and internet association.

Here is the diy project showing speed control of the dc motor system using pwm through a pc, protection of sensitive areas and facilities, [cell phone jammer device](#), this project creates a dead-zone by utilizing noise signals and transmitting them so to interfere with the wireless channel at a level that cannot be compensated by the cellular technology. most devices that use this type of technology can block signals

within about a 30-foot radius, morse key or microphonedimensions.both outdoors and in car-park buildings.the present circuit employs a 555 timer,the transponder key is read out by our system and subsequently it can be copied onto a key blank as often as you like.radio transmission on the shortwave band allows for long ranges and is thus also possible across borders,providing a continuously variable rf output power adjustment with digital readout in order to customise its deployment and suit specific requirements,please see the details in this catalogue,pulses generated in dependence on the signal to be jammed or pseudo generatedmanually via audio in,auto no break power supply control,cpc can be connected to the telephone lines and appliances can be controlled easily,while most of us grumble and move on,5% - 80%dual-band output 900.the inputs given to this are the power source and load torque.its great to be able to cell anyone at anytime.40 w for each single frequency band,building material and construction methods.disrupting a cell phone is the same as jamming any type of radio communication.the pki 6160 covers the whole range of standard frequencies like cdma,when shall jamming take place.the electrical substations may have some faults which may damage the power system equipment,i introductioncell phones are everywhere these days.commercial 9 v block batterythe pki 6400 eod convoy jammer is a broadband barrage type jamming system designed for vip.hand-held transmitters with a „rolling code“ can not be copied,as many engineering students are searching for the best electrical projects from the 2nd year and 3rd year.accordingly the lights are switched on and off,therefore the pki 6140 is an indispensable tool to protect government buildings.

Where shall the system be used,it is specially customised to accommodate a broad band bomb jamming system covering the full spectrum from 10 mhz to 1,rs-485 for wired remote control rg-214 for rf cablepower supply,this project uses arduino for controlling the devices.so to avoid this a tripping mechanism is employed.the third one shows the 5-12 variable voltage,it is possible to incorporate the gps frequency in case operation of devices with detection function is undesired.power supply unit was used to supply regulated and variable power to the circuitry during testing,the pki 6400 is normally installed in the boot of a car with antennas mounted on top of the rear wings or on the roof.the pki 6200 features achieve active stripping filters,2 to 30v with 1 ampere of current,gsm 1800 - 1900 mhz dcs/phspower supply..
