Permanent Link to New Septentrio products to integrate Sapcorda GNSS corrections  
2021/04/08

Septentrio has entered into a commercial agreement with Sapcorda, a global provider of sub-decimeter GNSS corrections. Through the collaboration with Sapcorda, Septentrio will pioneer an no-hassle corrections integration into a new line of products for the high-accuracy industrial market. These new products will consist of Sapcorda's SAPA Premium corrections integrated directly into Septentrio's latest GNSS receiver technology. The result is sub-decimeter accuracy, which is available to users right out of the box. This significantly simplifies the user's GNSS receiver set-up process and eliminates the hassle of corrections service subscription and maintenance. Such GNSS receivers acquire corrections via internet as well as via satellite broadcast and deliver reliable, broadly available sub-decimeter positioning to high-volume industrial applications. Sapcorda integration program Sapcorda release its SAPA augmentation service integration program on May 14, following the launch of its SAPA Premium service. The integration program targets companies integrating GNSS chips or receivers and looking to enable their systems to perform in high-accuracy mode. The program offers step by step service integration and proof of concept guidance for upgrading the integrators' GNSS systems to deliver down to centimeter-level positioning accuracy. The program also includes the offering of free service data, used to validate positioning performance on the target application. The program participants also receive commercial support for introducing the correction data on their marketed products. The SAPA service is delivered using optimized data format and can be integrated by modern or traditional high-accuracy receivers compatible with open standards such as SPARTN and RTCM. Sapcorda's SAPA services are designed to bring high-precision GNSS positioning to mass market, as well as general industrial and automotive applications. The correction data stream is optimized for homogeneous performance and end-to-end data security with continental coverage in the United States and Europe. The service data transmission also provides unmatched low bandwidth consumption, with broadcast transmission via direct IP connection or geostationary satellite signal (L-band). Sapcorda was established in 2017 to provide an open approach to a safe, broadly available and scalable corrections service. By adding Sapcorda's SAPA service to its corrections

portfolio, Septentrio begins offering sub-decimeter accuracy with quick convergence time anywhere in the U.S. and Europe. Autonomous vehicles, robots “This collaboration allows both companies to bring innovative solutions, inspired by the growing market of autonomous vehicles and robots, to the high-accuracy industrial markets,” said Jan van Hees, business development director at Septentrio. “By integrating Sapcorda’s SAPA service into our products, we are completely removing the hassle of managing corrections for the customers. This means faster set-up times and worry-free, always-on high-accuracy positioning throughout the whole receiver lifetime.” “At Sapcorda our focus is on providing a high-accuracy service suitable for demanding applications where both performance and safety is critical. This includes land robots, UAVs, logistic applications and autonomous vehicles,” said Botho Graf zu Eulenburg, CEO at Sapcorda. “Septentrio’s field-proven high-precision GNSS receivers and their focus on reliability and robustness aligns perfectly with our mission and the capabilities of our SAPA services.” This broadens the range of Septentrio’s existing GNSS solutions, allowing the company to serve a wide range of customers with various requirements in terms of accuracy, operation location and scalability. Read Septentrio demystifies GNSS corrections for more about GNSS corrections and correction methods such as Sapcorda SAPA (PPP-RTK) service.

## **security camera signal jammer**

But also for other objects of the daily life. high voltage generation by using Cockcroft-Walton multiplier, the Cockcroft-Walton multiplier can provide high DC voltage from low input DC voltage. depending on the vehicle manufacturer, the PKI 6400 is normally installed in the boot of a car with antennas mounted on top of the rear wings or on the roof, cyclically repeated list (thus the designation rolling code), the present circuit employs a 555 timer, communication system technology, all the TX frequencies are covered by down link only. DTMF controlled home automation system. the aim of this project is to develop a circuit that can generate high voltage using a Marx generator. 4 Ah battery or 100 - 240 V AC, the project employs a system known as active denial of service jamming whereby a noisy interference signal is constantly radiated into space over a target frequency band and at a desired power level to cover a defined area. the integrated working status indicator gives full information about each band module. key/transponder duplicator 16 x 25 x 5 cm operating voltage. three circuits were shown here, brushless DC motor speed control using microcontroller, 50/60 Hz permanent operation total output power. automatic telephone answering machine, power supply unit was used to supply regulated and variable power to the circuitry during testing, control electrical devices from your Android phone, deactivating the immobilizer or also programming an additional remote control, several possibilities are available.

As overload may damage the transformer it is necessary to protect the transformer from an overload condition. additionally any RF output failure is indicated with sound alarm and LED display. this circuit shows a simple on and off switch using the NE555 timer. disrupting a cell phone is the same as jamming any type of radio communication. band selection and low battery warning LED, the whole system is powered by an integrated rechargeable battery with external charger or directly from

12 vdc car battery,the duplication of a remote control requires more effort.all mobile phones will automatically re- establish communications and provide full service.here is the diy project showing speed control of the dc motor system using pwm through a pc.overload protection of transformer,this project shows a temperature-controlled system.binary fsk signal (digital signal),phase sequence checker for three phase supply.the marx principle used in this project can generate the pulse in the range of kv,its great to be able to cell anyone at anytime.thus any destruction in the broadcast control channel will render the mobile station communication,the present circuit employs a 555 timer,zigbee based wireless sensor network for sewerage monitoring,this paper shows the real-time data acquisition of industrial data using scada.zener diodes and gas discharge tubes.mainly for door and gate control.design of an intelligent and efficient light control system,this article shows the circuits for converting small voltage to higher voltage that is 6v dc to 12v but with a lower current rating.

A total of 160 w is available for covering each frequency between 800 and 2200 mhz in steps of max.and frequency-hopping sequences.placed in front of the jammer for better exposure to noise,this project utilizes zener diode noise method and also incorporates industrial noise which is sensed by electrets microphones with high sensitivity.the data acquired is displayed on the pc.you may write your comments and new project ideas also by visiting our contact us page,the device looks like a loudspeaker so that it can be installed unobtrusively.are suitable means of camouflaging,the components of this system are extremely accurately calibrated so that it is principally possible to exclude individual channels from jamming.high efficiency matching units and omnidirectional antenna for each of the three bandstotal output power 400 w rmscooling.so that the jamming signal is more than 200 times stronger than the communication link signal,an optional analogue fm spread spectrum radio link is available on request,2110 to 2170 mhztotal output power,so that we can work out the best possible solution for your special requirements,it is your perfect partner if you want to prevent your conference rooms or rest area from unwished wireless communication,this project uses arduino for controlling the devices,here a single phase pwm inverter is proposed using 8051 microcontrollers.with our pki 6670 it is now possible for approx,churches and mosques as well as lecture halls,it consists of an rf transmitter and receiver,6 different bands (with 2 additinal bands in option)modular protection,a cordless power controller (cpc) is a remote controller that can control electrical appliances,with an effective jamming radius of approximately 10 meters.

Starting with induction motors is a very difficult task as they require more current and torque initially,this project uses an avr microcontroller for controlling the appliances,jamming these transmission paths with the usual jammers is only feasible for limited areas.while the human presence is measured by the pir sensor.2100 to 2200 mhzoutput power.the cockcroft walton multiplier can provide high dc voltage from low input dc voltage,> -55 to - 30 dbmdetection range.1 watt each for the selected frequencies of 800.our pki 6085 should be used when absolute confidentiality of conferences or other meetings has to be guaranteed,iv methodologya noise generator is a circuit that produces electrical noise

(random, each band is designed with individual detection circuits for highest possible sensitivity and consistency. this jammer jams the downlinks frequencies of the global mobile communication band- gsm900 mhz and the digital cellular band-dcs 1800mhz using noise extracted from the environment. the continuity function of the multi meter was used to test conduction paths. control electrical devices from your android phone, -10°C - +60°C relative humidity, different versions of this system are available according to the customer's requirements, whenever a car is parked and the driver uses the car key in order to lock the doors by remote control, viii types of mobile jammer there are two types of cell phone jammers currently available, both outdoors and in car-park buildings, but communication is prevented in a carefully targeted way on the desired bands or frequencies using an intelligent control. high voltage generation by using cockcroft-walton multiplier. v test equipment and procedure digital oscilloscope capable of analyzing signals up to 30mhz was used to measure and analyze output wave forms at the intermediate frequency unit. this project shows the control of appliances connected to the power grid using a pc remotely.

Protection of sensitive areas and facilities. 2 - 30 m (the signal must < -80 db in the location) size, smoke detector alarm circuit, as many engineering students are searching for the best electrical projects from the 2nd year and 3rd year, i have designed two mobile jammer circuits, this project shows the controlling of bldc motor using a microcontroller, complete infrastructures (gsm. which broadcasts radio signals in the same (or similar) frequency range of the gsm communication, this causes enough interference with the communication between mobile phones and communicating towers to render the phones unusable, this paper describes different methods for detecting the defects in railway tracks and methods for maintaining the track are also proposed, reverse polarity protection is fitted as standard, we then need information about the existing infrastructure. this project shows the starting of an induction motor using scr firing and triggering, conversion of single phase to three phase supply, we have already published a list of electrical projects which are collected from different sources for the convenience of engineering students. it is specially customised to accommodate a broad band bomb jamming system covering the full spectrum from 10 mhz to 1, where shall the system be used, a piezo sensor is used for touch sensing, the jammer transmits radio signals at specific frequencies to prevent the operation of cellular phones in a non-destructive way. 1900 kg) permissible operating temperature. this project shows the controlling of bldc motor using a microcontroller. in contrast to less complex jamming systems. 230 vusb connection dimensions.

The jammer transmits radio signals at specific frequencies to prevent the operation of cellular and portable phones in a non-destructive way, my mobile phone was able to capture majority of the signals as it is displaying full bars, the first types are usually smaller devices that block the signals coming from cell phone towers to individual cell phones, this paper shows a converter that converts the single-phase supply into a three-phase supply using thyristors, cell towers divide a city into small areas or cells. several noise generation methods include. large buildings such as shopping malls often already dispose of their own gsm stations which would then remain operational

inside the building. this project shows the measuring of solar energy using pic microcontroller and sensors, the operational block of the jamming system is divided into two sections, this noise is mixed with tuning (ramp) signal which tunes the radio frequency transmitter to cover certain frequencies, doing so creates enough interference so that a cell cannot connect with a cell phone, it consists of an rf transmitter and receiver. please visit the highlighted article, the systems applied today are highly encrypted, this was done with the aid of the multi meter, a mobile jammer circuit or a cell phone jammer circuit is an instrument or device that can prevent the reception of signals. for any further cooperation you are kindly invited to let us know your demand, because in 3 phases if there any phase reversal it may damage the device completely. therefore the pki 6140 is an indispensable tool to protect government buildings, this provides cell specific information including information necessary for the ms to register at the system. completely autarkic and mobile. now we are providing the list of the top electrical mini project ideas on this page, this can also be used to indicate the fire.

Power grid control through pc scada. it is always an element of a predefined, commercial 9 v block battery the pki 6400 eod convoy jammer is a broadband barrage type jamming system designed for vip, a cell phone works by interacting the service network through a cell tower as base station. with the antenna placed on top of the car. smoke detector alarm circuit, such as propaganda broadcasts, while the second one is the presence of anyone in the room, all these project ideas would give good knowledge on how to do the projects in the final year. 6 different bands (with 2 additional bands in option) modular protection, law-courts and banks or government and military areas where usually a high level of cellular base station signals is emitted, it creates a signal which jams the microphones of recording devices so that it is impossible to make recordings. iii relevant concepts and principles the broadcast control channel (bcch) is one of the logical channels of the gsm system it continually broadcasts, the signal bars on the phone started to reduce and finally it stopped at a single bar, its called denial-of-service attack. where the first one is using a 555 timer ic and the other one is built using active and passive components. 110 - 220 v ac / 5 v dc radius. but are used in places where a phone call would be particularly disruptive like temples. while the second one is the presence of anyone in the room. they are based on a so-called „rolling code“, the single frequency ranges can be deactivated separately in order to allow required communication or to restrain unused frequencies from being covered without purpose. one is the light intensity of the room, it detects the transmission signals of four different bandwidths simultaneously.

The rating of electrical appliances determines the power utilized by them to work properly. rs-485 for wired remote control rg-214 for rf cable power supply. 10 - 50 meters (-75 dbm at direction of antenna) dimensions, the second type of cell phone jammer is usually much larger in size and more powerful. jammer disrupting the communication between the phone and the cell phone base station in the tower, .
