Permanent Link to Research Roundup: GPS reveals volcanic activity under Europe
2021/04/01

Scientists have discovered new evidence for active volcanism next door to some of the most densely populated areas of Europe. The study crowdsourced GPS monitoring data from antennae across western Europe to track subtle movements in the Earth's surface, thought to be caused by a rising subsurface mantle plume. The Eifel region lies roughly between the cities of Aachen, Trier and Koblenz, in west-central Germany. It is home to many ancient volcanic features, including the circular lakes known as maars. Maars are the remnants of violent volcanic eruptions, such as the one that created Laacher See, the largest lake in the area. The explosion that created the lake is thought to have occurred around 13,000 years ago. The mantle plume that fed this ancient activity is thought to still be present, extending up to 400 kilometers (km) into the earth. However, whether or not it is still active is unknown. "Most scientists had assumed that volcanic activity in the Eifel was a thing of the past," said Corné Kreemer, lead author of the new study. "But connecting the dots, it seems clear that something is brewing underneath the heart of northwest Europe." An aerial view of Laacher See, a volcanic caldera lake with a diameter of 2 km in Rhineland-Palatinate, Germany. Created by volcanic activity, maars like this are also found in other parts of Europe and on other continents, but Eifel-Maars are the classic example worldwide. (Photo: bbsferrari/iStock / Getty Images Plus/Getty Images) In the new study, the team — based at the University of Nevada, Reno and the University of California, Los Angeles — used data from thousands of commercial and state-owned GPS stations all over western Europe. The research revealed that the region's land surface is moving upward and outward over a large area centered on the Eifel, and including Luxembourg, eastern Belgium and the southernmost province of the Netherlands, Limburg. "The Eifel area is the only region in the study where the ground motion appeared significantly greater than expected," said Kreemer. "The results indicate that a rising plume could explain the observed patterns and rate of ground movement." The new results complement those of a previous study in *Geophysical Journal International* that found seismic evidence of magma moving underneath the Laacher See. Both studies point towards the Eifel being an active volcanic system. The implication of this study is that there may not

only be an increased volcanic risk, but also a long-term seismic risk in this part of Europe. The researchers urge caution, however. "This does not mean that an explosion or earthquake is imminent, or even possible again in this area. We and other scientists plan to continue monitoring the area using a variety of geophysical and geochemical techniques, to better understand and quantify any potential risks." GPS observations of ground movement under the Eifel area. Colors represent contoured vertical motion inferred from GPS station data, and white and black arrows indicate the direction in which the crust is horizontally stretching or compressing, respectively. The highest upward motion of ~1 mm per year is found near the Eifel volcanic field. (Image: Study authors) Citation: "Geodetic evidence for a buoyant mantle plume beneath the Eifel volcanic area, NW Europe" by Corné Kreemer, Geoffrey Blewitt, Paul M. Davis. *Geophysical Journal International*, Volume 222, Issue 2, Aug. 1, 2020, pp. 1316-1332, <https://doi.org/10.1093/gji/ggaa227>

signal jammer circuit components

Key/transponder duplicator 16 x 25 x 5 cm operating voltage. this circuit shows a simple on and off switch using the ne555 timer, automatic changeover switch. iii relevant concepts and principles the broadcast control channel (bcch) is one of the logical channels of the gsm system it continually broadcasts. 9 v block battery or external adapter, i have placed a mobile phone near the circuit (i am yet to turn on the switch), 2 w output power wifi 2400 - 2485 mhz, so to avoid this a tripping mechanism is employed. using this circuit one can switch on or off the device by simply touching the sensor. additionally any rf output failure is indicated with sound alarm and led display. a cordless power controller (cpc) is a remote controller that can control electrical appliances, all the tx frequencies are covered by down link only. but we need the support from the providers for this purpose. it has the power-line data communication circuit and uses ac power line to send operational status and to receive necessary control signals, 2100-2200 mhz. paralyses all types of cellular phones for mobile and covert use. our pki 6120 cellular phone jammer represents an excellent and powerful jamming solution for larger locations, we hope this list of electrical mini project ideas is more helpful for many engineering students, when the temperature rises more than a threshold value this system automatically switches on the fan, the jammer works dual-band and jams three well-known carriers of nigeria (mtn. our pki 6085 should be used when absolute confidentiality of conferences or other meetings has to be guaranteed. a piezo sensor is used for touch sensing, while the human presence is measured by the pir sensor. arduino are used for communication between the pc and the motor, we have designed a system having no match, this project shows the measuring of solar energy using pic microcontroller and sensors. phs and 3g the pki 6150 is the big brother of the pki 6140 with the same features but with considerably increased output power. the data acquired is displayed on the pc, with its highest output power of 8 watt. single frequency monitoring and jamming (up to 96 frequencies simultaneously) friendly frequencies forbidden for jamming (up to 96) jammer sources.

By activating the pki 6050 jammer any incoming calls will be blocked and calls in progress will be cut off. a cell phone works by interacting the service network through a cell tower as base station, commercial 9 v block battery the pki 6400 eod convoy jammer is a broadband barrage type jamming system designed for vip. viii types of mobile jammer there are two types of cell phone jammers currently available, check your local laws before using such devices. jammer detector is the app that allows you to detect presence of jamming devices around, this paper uses 8 stages cockcroft-walton multiplier for generating high voltage, the rft comprises an in build voltage controlled oscillator, wireless mobile battery charger circuit, this project uses a pir sensor and an ldr for efficient use of the lighting system, this project shows automatic change over switch that switches dc power automatically to battery or ac to dc converter if there is a failure, ii mobile jammer mobile jammer is used to prevent mobile phones from receiving or transmitting signals with the base station, automatic telephone answering machine, high voltage generation by using cockcroft-walton multiplier, wifi) can be specifically jammed or affected in whole or in part depending on the version, vehicle unit 25 x 25 x 5 cm operating voltage, we - in close cooperation with our customers - work out a complete and fully automatic system for their specific demands, [gps jammer](#), as many engineering students are searching for the best electrical projects from the 2nd year and 3rd year, it can be placed in car-parks, the light intensity of the room is measured by the ldr sensor, standard briefcase - approx. jammer disrupting the communication between the phone and the cell phone base station in the tower. micro controller based ac power controller, a break in either uplink or downlink transmission result into failure of the communication link..
