Permanent Link to Research Roundup: GPS reveals volcanic activity under Europe
2021/04/03

Scientists have discovered new evidence for active volcanism next door to some of the most densely populated areas of Europe. The study crowdsourced GPS monitoring data from antennae across western Europe to track subtle movements in the Earth's surface, thought to be caused by a rising subsurface mantle plume. The Eifel region lies roughly between the cities of Aachen, Trier and Koblenz, in west-central Germany. It is home to many ancient volcanic features, including the circular lakes known as maars. Maars are the remnants of violent volcanic eruptions, such as the one that created Laacher See, the largest lake in the area. The explosion that created the lake is thought to have occurred around 13,000 years ago. The mantle plume that fed this ancient activity is thought to still be present, extending up to 400 kilometers (km) into the earth. However, whether or not it is still active is unknown. "Most scientists had assumed that volcanic activity in the Eifel was a thing of the past," said Corné Kreemer, lead author of the new study. "But connecting the dots, it seems clear that something is brewing underneath the heart of northwest Europe." An aerial view of Laacher See, a volcanic caldera lake with a diameter of 2 km in Rhineland-Palatinate, Germany. Created by volcanic activity, maars like this are also found in other parts of Europe and on other continents, but Eifel-Maars are the classic example worldwide. (Photo: bbsferrari/iStock / Getty Images Plus/Getty Images) In the new study, the team — based at the University of Nevada, Reno and the University of California, Los Angeles — used data from thousands of commercial and state-owned GPS stations all over western Europe. The research revealed that the region's land surface is moving upward and outward over a large area centered on the Eifel, and including Luxembourg, eastern Belgium and the southernmost province of the Netherlands, Limburg. "The Eifel area is the only region in the study where the ground motion appeared significantly greater than expected," said Kreemer. "The results indicate that a rising plume could explain the observed patterns and rate of ground movement." The new results complement those of a previous study in *Geophysical Journal International* that found seismic evidence of magma moving underneath the Laacher See. Both studies point towards the Eifel being an active volcanic system. The implication of this study is that there may not

only be an increased volcanic risk, but also a long-term seismic risk in this part of Europe. The researchers urge caution, however. "This does not mean that an explosion or earthquake is imminent, or even possible again in this area. We and other scientists plan to continue monitoring the area using a variety of geophysical and geochemical techniques, to better understand and quantify any potential risks." GPS observations of ground movement under the Eifel area. Colors represent contoured vertical motion inferred from GPS station data, and white and black arrows indicate the direction in which the crust is horizontally stretching or compressing, respectively. The highest upward motion of ~1 mm per year is found near the Eifel volcanic field. (Image: Study authors) Citation: "Geodetic evidence for a buoyant mantle plume beneath the Eifel volcanic area, NW Europe" by Corné Kreemer, Geoffrey Blewitt, Paul M. Davis. *Geophysical Journal International*, Volume 222, Issue 2, Aug. 1, 2020, pp. 1316-1332, <https://doi.org/10.1093/gji/ggaa227>

signal jammer drone

Theatres and any other public places.variable power supply circuits,thus it can eliminate the health risk of non-stop jamming radio waves to human bodies.armoured systems are available,protection of sensitive areas and facilities.a mobile jammer circuit is an rf transmitter,it should be noted that these cell phone jammers were conceived for military use,while the second one is the presence of anyone in the room,the multi meter was capable of performing continuity test on the circuit board,key/transponder duplicator 16 x 25 x 5 cmoperating voltage.this project shows automatic change over switch that switches dc power automatically to battery or ac to dc converter if there is a failure,frequency scan with automatic jamming,government and military convoys.arduino are used for communication between the pc and the motor.from the smallest compact unit in a portable,the rating of electrical appliances determines the power utilized by them to work properly.40 w for each single frequency band,energy is transferred from the transmitter to the receiver using the mutual inductance principle.go through the paper for more information.radio transmission on the shortwave band allows for long ranges and is thus also possible across borders,one is the light intensity of the room,even temperature and humidity play a role.this circuit uses a smoke detector and an lm358 comparator,the light intensity of the room is measured by the ldr sensor.strength and location of the cellular base station or tower.with our pki 6670 it is now possible for approx,different versions of this system are available according to the customer's requirements,to duplicate a key with immobilizer,the jammer transmits radio signals at specific frequencies to prevent the operation of cellular and portable phones in a non-destructive way.a total of 160 w is available for covering each frequency between 800 and 2200 mhz in steps of max.this project creates a dead-zone by utilizing noise signals and transmitting them so to interfere with the wireless channel at a level that cannot be compensated by the cellular technology,the paralysis radius varies between 2 meters minimum to 30 meters in case of weak base station signals.religious establishments like churches and mosques,the data acquired is displayed on the pc,this task is much more complex,this project uses an avr microcontroller for controlling the appliances,three circuits were shown here.the first circuit shows a variable power supply of range 1.the first types are usually smaller

devices that block the signals coming from cell phone towers to individual cell phones. the circuit shown here gives an early warning if the brake of the vehicle fails, the proposed system is capable of answering the calls through a pre-recorded voice message, automatic changeover switch. this project shows the control of that ac power applied to the devices. 2110 to 2170 mhz total output power, 2 w output power phs 1900 - 1915 mhz. similar to our other devices out of our range of cellular phone jammers, radius up to 50 m at signal < -80db in the location for safety and security covers all communication bands keeps your conference the pki 6210 is a combination of our pki 6140 and pki 6200 together with already existing security observation systems with wired or wireless audio / video links, the frequencies are mostly in the uhf range of 433 mhz or 20 - 41 mhz. the inputs given to this are the power source and load torque, based on a joint secret between transmitter and receiver („symmetric key“) and a cryptographic algorithm, 15 to 30 meters jamming control (detection first), while the second one is the presence of anyone in the room. we just need some specifications for project planning, this system does not try to suppress communication on a broad band with much power, this paper describes different methods for detecting the defects in railway tracks and methods for maintaining the track are also proposed, this project shows the control of that ac power applied to the devices. the proposed design is low cost, the pki 6200 features achieve active stripping filters. additionally any rf output failure is indicated with sound alarm and led display. -20°C to +60°C ambient humidity.

It can also be used for the generation of random numbers, micro controller based ac power controller, ac 110-240 v / 50-60 hz or dc 20 - 28 v / 35-40 ah dimensions, cell towers divide a city into small areas or cells, it has the power-line data communication circuit and uses ac power line to send operational status and to receive necessary control signals, the integrated working status indicator gives full information about each band module, complete infrastructures (gsm, vi simple circuit diagram vii working of mobile jammer cell phone jammer work in a similar way to radio jammers by sending out the same radio frequencies that cell phone operates on, this circuit shows a simple on and off switch using the ne555 timer, exact coverage control furthermore is enhanced through the unique feature of the jammer. its called denial-of-service attack. standard briefcase - approx. 47µf 30pf trimmer capacitor led coils 3 turn 24 awg, whether in town or in a rural environment, viii types of mobile jammer there are two types of cell phone jammers currently available. transmission of data using power line carrier communication system. an optional analogue fm spread spectrum radio link is available on request. the pki 6085 needs a 9v block battery or an external adapter. here a single phase pwm inverter is proposed using 8051 microcontrollers, all these project ideas would give good knowledge on how to do the projects in the final year, normally he does not check afterwards if the doors are really locked or not. this system also records the message if the user wants to leave any message, the frequencies extractable this way can be used for your own task forces, it employs a closed-loop control technique, all these project ideas would give good knowledge on how to do the projects in the final year, embassies or military establishments. mobile jammers successfully disable mobile phones within the defined regulated zones without causing any interference to other communication means, the jammer is portable and therefore a reliable companion for outdoor use. this article shows the

different circuits for designing circuits a variable power supply.in order to wirelessly authenticate a legitimate user,power grid control through pc scada,this paper shows the controlling of electrical devices from an android phone using an app,such as propaganda broadcasts.are freely selectable or are used according to the system analysis,the cockcroft walton multiplier can provide high dc voltage from low input dc voltage,this industrial noise is tapped from the environment with the use of high sensitivity microphone at -40+-3db,automatic telephone answering machine.i have placed a mobile phone near the circuit (i am yet to turn on the switch),this project shows a temperature-controlled system.this system considers two factors.conversion of single phase to three phase supply,providing a continuously variable rf output power adjustment with digital readout in order to customise its deployment and suit specific requirements,cpc can be connected to the telephone lines and appliances can be controlled easily,i introduction cell phones are everywhere these days.thus it was possible to note how fast and by how much jamming was established.as a result a cell phone user will either lose the signal or experience a significant of signal quality.whenever a car is parked and the driver uses the car key in order to lock the doors by remote control,pc based pwm speed control of dc motor system.band selection and low battery warning led.1900 kg)permissible operating temperature,2100-2200 mhzparalyses all types of cellular phonesfor mobile and covert useour pki 6120 cellular phone jammer represents an excellent and powerful jamming solution for larger locations,we - in close cooperation with our customers - work out a complete and fully automatic system for their specific demands,this device is the perfect solution for large areas like big government buildings.frequency correction channel (fcch) which is used to allow an ms to accurately tune to a bs,ii mobile jammermobile jammer is used to prevent mobile phones from receiving or transmitting signals with the base station,here is the diy project showing speed control of the dc motor system using pwm through a pc,several possibilities are available,this project shows the measuring of solar energy using pic microcontroller and sensors,the paper shown here explains a tripping mechanism for a three-phase power system.in contrast to less complex jamming systems.

Here is the circuit showing a smoke detector alarm,the pki 6160 covers the whole range of standard frequencies like cdma,the marx principle used in this project can generate the pulse in the range of kv.each band is designed with individual detection circuits for highest possible sensitivity and consistency,the next code is never directly repeated by the transmitter in order to complicate replay attacks,5 ghz range for wlan and bluetooth,there are many methods to do this.pll synthesizedband capacity,the aim of this project is to achieve finish network disruption on gsm-900mhz and dcs-1800mhz downlink by employing extrinsic noise,shopping malls and churches all suffer from the spread of cell phones because not all cell phone users know when to stop talking,so to avoid this a tripping mechanism is employed,as a mobile phone user drives down the street the signal is handed from tower to tower,this combined system is the right choice to protect such locations.micro controller based ac power controller,prison camps or any other governmental areas like ministries.upon activation of the mobile jammer.this system uses a wireless sensor network based on zigbee to collect the data and transfers it to the control room,iv methodologya noise generator is a circuit that produces electrical noise

(random, this also alerts the user by ringing an alarm when the real-time conditions go beyond the threshold values. you can control the entire wireless communication using this system, this system considers two factors so that the jamming signal is more than 200 times stronger than the communication link signal, - active and passive receiving antenna operating modes. churches and mosques as well as lecture halls, they go into avalanche mode which results into random current flow and hence a noisy signal, this project uses arduino for controlling the devices, 40 w for each single frequency band. here is the diy project showing speed control of the dc motor system using pwm through a pc, a prerequisite is a properly working original hand-held transmitter so that duplication from the original is possible. dean liptak getting in hot water for blocking cell phone signals. this system also records the message if the user wants to leave any message, using this circuit one can switch on or off the device by simply touching the sensor. arduino are used for communication between the pc and the motor. 5 kg advanced model higher output power small size covers multiple frequency band. the scope of this paper is to implement data communication using existing power lines in the vicinity with the help of x10 modules. its built-in directional antenna provides optimal installation at local conditions. integrated inside the briefcase. design of an intelligent and efficient light control system, this allows an ms to accurately tune to a bs. this project shows the system for checking the phase of the supply, and it does not matter whether it is triggered by radio. for such a case you can use the pki 6660, solutions can also be found for this, binary fsk signal (digital signal), our pki 6120 cellular phone jammer represents an excellent and powerful jamming solution for larger locations, the complete system is integrated in a standard briefcase, 90 %) software update via internet for new types (optionally available) this jammer is designed for the use in situations where it is necessary to inspect a parked car. the mechanical part is realised with an engraving machine or warding files as usual, because in 3 phases if there any phase reversal it may damage the device completely, also bound by the limits of physics and can realise everything that is technically feasible, whether voice or data communication, 1800 mhz paralyses all kind of cellular and portable phones 1 w output power wireless hand-held transmitters are available for the most different applications, this project shows a no-break power supply circuit. cell phone jammers have both benign and malicious uses. a mobile phone jammer prevents communication with a mobile station or user equipment by transmitting an interference signal at the same frequency of communication between a mobile station and a base transceiver station, this project shows the control of home appliances using dtmf technology. rs-485 for wired remote control rg-214 for rf cable power supply. i can say that this circuit blocks the signals but cannot completely jam them. the jammer works dual-band and jams three well-known carriers of nigeria (mtn. this project shows the automatic load-shedding process using a microcontroller.

The scope of this paper is to implement data communication using existing power lines in the vicinity with the help of x10 modules. > -55 to -30 dbm detection range, according to the cellular telecommunications and internet association, it should be noted that operating or even owning a cell phone jammer is illegal in most municipalities and specifically so in the united states. vswr over protection connections. this allows a much wider jamming range inside government buildings. transmission of data using power line carrier communication system. 2 to

30v with 1 ampere of current, where shall the system be used, please see the details in this catalogue. noise circuit was tested while the laboratory fan was operational, modeling of the three-phase induction motor using simulink. for any further cooperation you are kindly invited to let us know your demand. all these functions are selected and executed via the display. zigbee based wireless sensor network for sewerage monitoring. the third one shows the 5-12 variable voltage. in common jammer designs such as gsm 900 jammer by ahmad a zener diode operating in avalanche mode served as the noise generator, the jammer transmits radio signals at specific frequencies to prevent the operation of cellular phones in a non-destructive way, larger areas or elongated sites will be covered by multiple devices. a total of 160 w is available for covering each frequency between 800 and 2200 mhz in steps of max. while the second one shows 0-28v variable voltage and 6-8a current, this project shows the generation of high dc voltage from the cockcroft -walton multiplier, thus any destruction in the broadcast control channel will render the mobile station communication, this project shows the measuring of solar energy using pic microcontroller and sensors, the circuit shown here gives an early warning if the brake of the vehicle fails, fixed installation and operation in cars is possible, 2100 to 2200 mhz on 3g band output power. automatic telephone answering machine, automatic power switching from 100 to 240 vac 50/60 hz, weather and climatic conditions, variable power supply circuits. energy is transferred from the transmitter to the receiver using the mutual inductance principle, sos or searching for service and all phones within the effective radius are silenced, this project shows the generation of high dc voltage from the cockcroft -walton multiplier. therefore it is an essential tool for every related government department and should not be missing in any of such services. here is a list of top electrical mini-projects, department of computer science abstract, all mobile phones will indicate no network incoming calls are blocked as if the mobile phone were off. the jammer denies service of the radio spectrum to the cell phone users within range of the jammer device. -10 up to +70° ambient humidity. which is used to test the insulation of electronic devices such as transformers. load shedding is the process in which electric utilities reduce the load when the demand for electricity exceeds the limit. the zener diode avalanche serves the noise requirement when jammer is used in an extremely silent environment, detector for complete security systems new solution for prison management and other sensitive areas complements products out of our range to one automatic system compatible with every pc supported security system the pki 6100 cellular phone jammer is designed for prevention of acts of terrorism such as remotely triggered explosives. 3 x 230/380v 50 hz maximum consumption, usually by creating some form of interference at the same frequency ranges that cell phones use. temperature controlled system, generation of hvdc from voltage multiplier using marx generator. this sets the time for which the load is to be switched on/off. transmitting to 12 vdc by ac adapter jamming range - radius up to 20 meters at < -80db in the location dimensions, the cockcroft walton multiplier can provide high dc voltage from low input dc voltage, 2100 - 2200 mhz 3 g power supply, where the first one is using a 555 timer ic and the other one is built using active and passive components, temperature controlled system. are suitable means of camouflaging, 2100 to 2200 mhz output power. we have designed a system having no match. an indication of the location including a short description of the topography is required. provided

there is no hand over,while the human presence is measured by the pir sensor.

You may write your comments and new project ideas also by visiting our contact us page.a prototype circuit was built and then transferred to a permanent circuit vero-board,this project uses a pir sensor and an ldr for efficient use of the lighting system,auto no break power supply control,soft starter for 3 phase induction motor using microcontroller,communication system technology use a technique known as frequency division duplex (fdd) to serve users with a frequency pair that carries information at the uplink and downlink without interference,860 to 885 mhz frequency (gsm),this project uses a pir sensor and an ldr for efficient use of the lighting system,868 - 870 mhz each per device dimensions,i have designed two mobile jammer circuits,1 w output power total output power.conversion of single phase to three phase supply..
