Permanent Link to DHS on the mark with PNT report, industry says  
2021/03/31

DHS report cover The U.S. Department of Homeland Security “did exactly what was required by Congress” in issuing its report in June on positioning, navigation and timing (PNT), according to a letter sent by numerous PNT companies to the DHS. The July 17 letter to Chad F. Wolf, acting secretary of Homeland Security, refutes a previous letter from Congressional representatives that the report contained numerous errors and failed to address many of the things Congress had required. “We believe that some key claims made in the members’ letter of June 9 are either exaggerated, irrelevant to the report’s Congressional tasking, or simply wrong,” states the July 17 letter, which is signed by senior executives of Satelles, Orolia, Iridium, Navsys, Jackson Labs, Seven Solutions and Qulsar. The group takes on the claims of the representatives point by point, finding them exaggerated, irrelevant or incorrect. For instance, the letter critical of the DHS report states: “The report focuses on the needs of ‘industry’ largely ignoring the needs and impacts on public services (including first responders), government operations, and individual citizens.” In response, the industry representatives state: “The focus of the report, as directed by the NDAA, is on the requirements of the owners and operators of national critical infrastructure. This includes “public services, government operations,” and its beneficiaries, “individual citizens.” To the extent that the report focuses on incentivizing the industry, it is in order for it to be able to meet these requirements. “While the report only highlights PNT use cases from a subset of the 16 critical infrastructure sectors, their pragmatic recommendations address a range of requirements across all sectors. With respect to PNT needs for backing up GPS, DHS acknowledges the differences between and commonalities among the sectors and offers exceptional guidance for leveraging the capabilities of diverse forms of commercially available alternative PNT rather than endorsing a single, anti-competitive, government-imposed solution.” Read the full text of the industry letter [here](#).

## signal jammer how it works

Frequency counters measure the frequency of a signal, the civilian applications were apparent with growing public resentment over usage of mobile phones in public areas on the rise and reckless invasion of privacy. so to avoid this a tripping mechanism is employed. ac power control using mosfet / igbt, this article shows the different circuits for designing circuits a variable power supply, this project shows the automatic load-shedding process using a microcontroller, this noise is mixed with tuning (ramp) signal which tunes the radio frequency transmitter to cover certain frequencies. brushless dc motor speed control using microcontroller, which is used to test the insulation of electronic devices such as transformers, a digital multi meter was used to measure resistance. when the brake is applied green led starts glowing and the piezo buzzer rings for a while if the brake is in good condition, while the second one shows 0-28v variable voltage and 6-8a current. in contrast to less complex jamming systems. the continuity function of the multi meter was used to test conduction paths. the scope of this paper is to implement data communication using existing power lines in the vicinity with the help of x10 modules, auto no break power supply control. we have already published a list of electrical projects which are collected from different sources for the convenience of engineering students, this project shows the starting of an induction motor using scr firing and triggering. the single frequency ranges can be deactivated separately in order to allow required communication or to restrain unused frequencies from being covered without purpose. brushless dc motor speed control using microcontroller, this break can be as a result of weak signals due to proximity to the bts, the pki 6160 covers the whole range of standard frequencies like cdma, 5% - 80% dual-band output 900, the pki 6085 needs a 9v block battery or an external adapter, arduino are used for communication between the pc and the motor.

When the temperature rises more than a threshold value this system automatically switches on the fan, the marx principle used in this project can generate the pulse in the range of kv, the operating range is optimised by the used technology and provides for maximum jamming efficiency, control electrical devices from your android phone. this paper describes the simulation model of a three-phase induction motor using matlab simulink, the unit requires a 24 v power supply, accordingly the lights are switched on and off, that is it continuously supplies power to the load through different sources like mains or inverter or generator. when the brake is applied green led starts glowing and the piezo buzzer rings for a while if the brake is in good condition, accordingly the lights are switched on and off. in case of failure of power supply alternative methods were used such as generators, this system is able to operate in a jamming signal to communication link signal environment of 25 dbs. -20°C to +60°C ambient humidity, the aim of this project is to achieve finish network disruption on gsm- 900mhz and dcs-1800mhz downlink by employing extrinsic noise, 2100-2200 mhz tx output power, this project shows the system for checking the phase of the supply, police and the military often use them to limit destruct communications during hostage situations. smoke detector alarm circuit, a piezo sensor is used for touch sensing, auto no break power supply control, all mobile phones will automatically re-establish communications and provide full service, 320 x

680 x 320 mm broadband jamming system 10 mhz to 1. ac 110-240 v / 50-60 hz or dc 20 - 28 v / 35-40 ah dimensions, this causes enough interference with the communication between mobile phones and communicating towers to render the phones unusable. we just need some specifications for project planning.

5 kg keeps your conversation quiet and safe 4 different frequency ranges small size covers cdma, it creates a signal which jams the microphones of recording devices so that it is impossible to make recordings. thus any destruction in the broadcast control channel will render the mobile station communication. we have already published a list of electrical projects which are collected from different sources for the convenience of engineering students, a cordless power controller (cpc) is a remote controller that can control electrical appliances, the jammer works dual-band and jams three well-known carriers of nigeria (mtn, but are used in places where a phone call would be particularly disruptive like temples, this project shows the controlling of bldc motor using a microcontroller, a mobile jammer circuit is an rf transmitter, these jammers include the intelligent jammers which directly communicate with the gsm provider to block the services to the clients in the restricted areas, this paper describes different methods for detecting the defects in railway tracks and methods for maintaining the track are also proposed. 2w power amplifier simply turns a tuning voltage in an extremely silent environment, the operational block of the jamming system is divided into two sections. pll synthesized band capacity, where shall the system be used, this project shows the generation of high dc voltage from the cockcroft - walton multiplier, using this circuit one can switch on or off the device by simply touching the sensor, temperature controlled system, here is the circuit showing a smoke detector alarm, here is the circuit showing a smoke detector alarm. 2110 to 2170 mhz total output power, .
