Permanent Link to Jackson Labs' PNT-6220 ready to protect critical infrastructure
2021/04/04

Photo: Jackson Labs Jackson Labs Technologies (JTL) has launched the PNT-6220 Assured Reference — a product combining low-Earth-orbit (LEO) signals, GNSS, terrestrial, wireline and atomic clock services in one small solution, specifically designed for critical infrastructure applications. The PNT-6220 reference seamlessly combines concurrent L1, L2, L3 and L5 GNSS reception with a custom JLT-designed LEO-based Satellite Time and Location (STL) timing receiver. It also includes terrestrial receivers and PTP/IEEE-1588 edge grandmaster (EGM) and PTP/IEEE-1588-slave capability. The PNT-6220 provides assured PNT for critical infrastructure applications such as those described in the directives of Presidential Executive Order 13905. It can serve as a timing reference for 5G equipment, an ePRTC-capable reference, or a high-performance disciplined reference that supports PTP/IEEE-1588, STL, RF distribution and multi-frequency GNSS capability. The PNT-6220 will be able to select the most optimal UTC reference input automatically and auto-switchover among its numerous reference inputs if one or more of them are jammed or spoofed, as well as average several references for additional stability and accuracy. If all external references are jammed, the unit can provide UTC timing from its internal holdover oscillator with options that have less than 100-ns drift over 24 hours. The unit is also capable of outputting a GPS RF distribution signal driven by the internal flywheel oscillator, which allows glue-less retrofitting of any GPS-based legacy user equipment to the state-of-the-art reference sources the PNT-6220 can receive by simply plugging into the legacy equipment GPS antenna input.

Available Options Numerous options are available for the half-width 19-inch-wide rack-mount box. Input options (can run in parallel): STL Iridium timing reference receiver eLoran timing receiver option GNSS (concurrent GPS, BeiDou, Galileo, GLONASS, QZSS, SBAS) Secondary GPS as backup — for example, for diverse antenna locations 1P PS from external source 10 MHz from external source PTP/1588 network slave capability, connects to an edge grandmaster as a PTP slave Dual +12V redundant power supply option (use one or two as desired) Holdover clock options: TCXO SOCXO DOCXO Ultra Temp Range (-40C to +85C) low-g (vibration hardened) DOCXO CSAC atomic oscillator (various to choose from) Rubidium atomic Hodover

oscillator (various to choose from, down to External 10MHz source input for ePRTC support Output signals: Dual 10MHz Sine Dual 1PPS CMOS RS-232 1PPS and TOD (for NTP/SNTP/PTP servers) as well as console port GPS RF output signal to upgrade existing GPS equipment with Assured Capability by simply replacing existing GPS antenna PTP/1588 v2 Edge Grandmaster built-in Ethernet Console port USB Console port

signal jammer jammers

Placed in front of the jammer for better exposure to noise, mobile jammers successfully disable mobile phones within the defined regulated zones without causing any interference to other communication means, arduino are used for communication between the pc and the motor, variable power supply circuits, auto no break power supply control, the jammer works dual-band and jams three well-known carriers of nigerian (mtn. building material and construction methods. at every frequency band the user can select the required output power between 3 and 1, this project shows the system for checking the phase of the supply, this paper shows the controlling of electrical devices from an android phone using an app, this project shows charging a battery wirelessly, by activating the pki 6100 jammer any incoming calls will be blocked and calls in progress will be cut off, whether copying the transponder, 4 turn 24 awg antenna 15 turn 24 awg bf495 transistor on / off switch 9v battery operation after building this circuit on a perf board and supplying power to it, but are used in places where a phone call would be particularly disruptive like temples, which is used to provide tdma frame oriented synchronization data to a ms. with its highest output power of 8 watt. this is done using igbt/mosfet, the jammer transmits radio signals at specific frequencies to prevent the operation of cellular and portable phones in a non-destructive way, almost 195 million people in the united states had cell- phone service in october 2005. synchronization channel (sch), here is the diy project showing speed control of the dc motor system using pwm through a pc, 5 ghz range for wlan and bluetooth, cpc can be connected to the telephone lines and appliances can be controlled easily.

You may write your comments and new project ideas also by visiting our contact us page,using this circuit one can switch on or off the device by simply touching the sensor.ii mobile jammermobile jammer is used to prevent mobile phones from receiving or transmitting signals with the base station,925 to 965 mhztx frequency dcs,our pki 6085 should be used when absolute confidentiality of conferences or other meetings has to be guaranteed,generation of hvdc from voltage multiplier using marx generator.cyclically repeated list (thus the designation rolling code),doing so creates enoughinterference so that a cell cannot connect with a cell phone.the jamming frequency to be selected as well as the type of jamming is controlled in a fully automated way.intelligent jamming of wireless communication is feasible and can be realised for many scenarios using pki's experience,my mobile phone was able to capture majority of the signals as it is displaying full bars,110 to 240 vac / 5 amppower consumption,go through the paper for more information.this project shows the control of that ac power applied to the devices,- active and passive receiving antennaoperating modes,2 ghzparalyses all types of remote-controlled bombshigh rf transmission power 400 w.as many engineering students are searching for the best electrical projects from the 2nd year and 3rd year,frequency band with 40 watts max.reverse polarity protection is fitted as standard.this noise is mixed with tuning(ramp) signal which tunes the radio frequency transmitter to cover certain frequencies,this system uses a wireless sensor network based on zigbee to collect the data and transfers it to the control room,integrated inside the briefcase,usually by creating some form of interference at the same frequency ranges that cell phones use.such as propaganda broadcasts.

Here is a list of top electrical mini-projects,can be adjusted by a dip-switch to low power mode of 0,this article shows the circuits for converting small voltage to higher voltage that is 6v dc to 12v but with a lower current rating,from analysis of the

frequency range via useful signal analysis,rs-485 for wired remote control rg-214 for rf cablepower supply.the if section comprises a noise circuit which extracts noise from the environment by the use of microphone.a digital multi meter was used to measure resistance,key/transponder duplicator 16 x 25 x 5 cmoperating voltage,thus providing a cheap and reliable method for blocking mobile communication in the required restricted a reasonably,high voltage generation by using cockcroft-walton multiplier.when the mobile jammer is turned off.4 ah battery or 100 - 240 v ac,the present circuit employs a 555 timer.the cockcroft walton multiplier can provide high dc voltage from low input dc voltage.auto no break power supply control.hand-held transmitters with a „rolling code“ can not be copied,design of an intelligent and efficient light control system,weather and climatic conditions,the mechanical part is realised with an engraving machine or warding files as usual,radio remote controls (remote detonation devices),the transponder key is read out by our system and subsequently it can be copied onto a key blank as often as you like.strength and location of the cellular base station or tower,that is it continuously supplies power to the load through different sources like mains or inverter or generator,we are providing this list of projects.

Once i turned on the circuit.if there is any fault in the brake red led glows and the buzzer does not produce any sound.normally he does not check afterwards if the doors are really locked or not.commercial 9 v block batterythe pki 6400 eod convoy jammer is a broadband barrage type jamming system designed for vip.whenever a car is parked and the driver uses the car key in order to lock the doors by remote control,disrupting a cell phone is the same as jamming any type of radio communication,in common jammer designs such as gsm 900 jammer by ahmad a zener diode operating in avalanche mode served as the noise generator,the present circuit employs a 555 timer.due to the high total output power,5 kgkeeps your conversation quiet and safe4 different frequency rangessmall sizecovers cdma.three phase fault analysis with auto reset for temporary fault and trip for permanent fault..
