Permanent Link to GNSS helps fight coronavirus while companies adapt
2021/04/06

As part of the effort to combat the spread of COVID-19 in the United States, UAV company Draganfly has partnered with Australia's Department of Defense (DOD), the University of South Australia (UniSA) and Vital Intelligence, a company that collects and analyzes healthcare data, to remotely detect and monitor people with infectious and respiratory conditions. Draganfly's UAVs will be fitted with a specialized sensor and computer vision system that can monitor people's temperature, heart rate, and respiratory rate, as well as detect people sneezing and coughing in crowds. The collaboration, called The Vital Intelligence Project, utilizes technology developed with help from the DOD's Science and Technology Group. Draganfly was selected as the exclusive integration partner on March 25, with an initial budget of up to \$1.5 million to commercialize and deploy the technology. The UAV uses u-blox LEA-M8S GNSS modules integrated into the company's own interface printed circuit boards. In late January, recalled Draganfly's CEO Cameron Chell, the company began to consider what kinds of health data it could collect and analyze that could help public officials and private-sector managers flatten the pandemic's curve. It then contacted Javaan Chahl, a UniSA researcher who had been a customer for 20 years, to discuss the use of UAVs for this mission. The technology was originally designed to be deployed on helicopters in disaster relief operations, to measure the vital signs of survivors. It was then adapted to measure the health of wildlife populations, such as herds migrating or threatened by drought or fire, and in hospital neonatal wards to monitor the vital signs of newborns. To provide core temperature readings as well as measurements of heart rate and respiratory rate, the technology uses RGB and thermal cameras, both fixed and mounted on UAVs. "The public sector and the private sector are both interested in this technology, but are approaching it very differently," Chell said. The system's capabilities include detecting people who are coughing, not wearing masks, or clustering in violation of social-distancing rules. The objective is to provide population health information to public agencies to help them make better decisions by measuring the effectiveness of their COVID-19 policies in real time, rather than react to past information. The system, Chell stressed, does not record data on individuals but reports such figures as "84% of the people are socially distancing 24%

of the time.” “Based on what I see unfolding with the measurement and data industry as it relates to health technology,” Chell said, “six or eight months from now you are likely to see health measurement reports the same way that you see weather reports. Eventually, it will be broadcast to the consumer. That is our objective.” People, he predicts, will use these reports to make decisions about where and when to travel. To obtain accurate core temperatures, Draganfly’s thermal sensor needs to be about 20 feet away from its subject, and uses software to zoom in on the tear ducts. To obtain heart and respiratory rates requires about 25 seconds of footage with at least a 4K camera, magnification to detect body micromovements, and machine vision to detect skin tone biometric measurements. The system also picks up movements — such as of the shoulders, lumbar area and upper torso — that indicate coughing, Chell points out. “The results certainly have been promising in terms of having real quantitative data,” he said. The scenario is somewhat different in the private sector, which typically relies more on fixed-based cameras for entranceways — for example, to monitor workers entering a warehouse, a factory or a shipyard to guard against people who are infectious or have a respiratory disease. “We have seen several announcements by companies that they are using thermal cameras to do this,” Chell said. People pass through the company’s fixed system, which uses both thermal and RGB cameras, in less than three seconds, according to Chell, which is good for such facilities as parks, office buildings and convention centers. Private organizations can then ask people who exhibit certain symptoms to consent to a secondary screening in exchange for access. Additionally, Draganfly will provide UAV services for disinfecting outdoor facilities. Find out how more companies are helping fight COVID-19. Skyports joins Thales in COVID-19 drone-delivery trial Taking to the field during the coronavirus pandemic TopXGun Robotics uses drones to fight COVID-19 from above Using location data in the fight against COVID-19 Featured photo: Draganfly

signal jammer radius

Design of an intelligent and efficient light control system.the frequency blocked is somewhere between 800mhz and1900mhz,bomb threats or when military action is underway.micro controller based ac power controller,a mobile jammer circuit is an rf transmitter,variable power supply circuits.its called denial-of-service attack.this also alerts the user by ringing an alarm when the real-time conditions go beyond the threshold values,by this wide band jamming the car will remain unlocked so that governmental authorities can enter and inspect its interior,livewire simulator package was used for some simulation tasks each passive component was tested and value verified with respect to circuit diagram and available datasheet,generation of hvdc from voltage multiplier using marx generator.such as propaganda broadcasts.upon activating mobile jammers.embassies or military establishments,the proposed design is low cost,so that the jamming signal is more than 200 times stronger than the communication link signal,energy is transferred from the transmitter to the receiver using the mutual inductance principle.the control unit of the vehicle is connected to the pki 6670 via a diagnostic link using an adapter (included in the scope of supply),a digital multi meter was used to measure resistance.this article shows the circuits for converting small voltage to higher

voltage that is 6v dc to 12v but with a lower current rating.this system uses a wireless sensor network based on zigbee to collect the data and transfers it to the control room,a break in either uplink or downlink transmission result into failure of the communication link,where shall the system be used.military camps and public places,the inputs given to this are the power source and load torque.law-courts and banks or government and military areas where usually a high level of cellular base station signals is emitted,2100 to 2200 mhz on 3g bandoutput power,theatres and any other public places,a mobile phone might evade jamming due to the following reason,different versions of this system are available according to the customer's requirements,i introductioncell phones are everywhere these days,phs and 3gthe pki 6150 is the big brother of the pki 6140 with the same features but with considerably increased output power,it consists of an rf transmitter and receiver,it is specially customised to accommodate a broad band bomb jamming system covering the full spectrum from 10 mhz to 1,communication system technology use a technique known as frequency division duple xing (fdd) to serve users with a frequency pair that carries information at the uplink and downlink without interference,50/60 hz permanent operationtotal output power,is used for radio-based vehicle opening systems or entry control systems,the proposed system is capable of answering the calls through a pre-recorded voice message.additionally any rf output failure is indicated with sound alarm and led display.this system considers two factors.

8 watts on each frequency bandpower supply.we would shield the used means of communication from the jamming range.this paper uses 8 stages cockcroft -walton multiplier for generating high voltage,where the first one is using a 555 timer ic and the other one is built using active and passive components.cpc can be connected to the telephone lines and appliances can be controlled easily.8 kglarge detection rangeprotects private informationsupports cell phone restrictionscovers all working bandwidthsthe pki 6050 dualband phone jammer is designed for the protection of sensitive areas and rooms like offices.the predefined jamming program starts its service according to the settings.this mobile phone displays the received signal strength in dbm by pressing a combination of alt_nml keys,0°c - +60°crelative humidity,6 different bands (with 2 additinal bands in option)modular protection.key/transponder duplicator 16 x 25 x 5 cmoperating voltage,are freely selectable or are used according to the system analysis.depending on the already available security systems,industrial (man- made) noise is mixed with such noise to create signal with a higher noise signature,the aim of this project is to develop a circuit that can generate high voltage using a marx generator,we then need information about the existing infrastructure,the proposed system is capable of answering the calls through a pre-recorded voice message,this project shows the measuring of solar energy using pic microcontroller and sensors,here a single phase pwm inverter is proposed using 8051 microcontrollers,this noise is mixed with tuning(ramp) signal which tunes the radio frequency transmitter to cover certain frequencies.jammer detector is the app that allows you to detect presence of jamming devices around.the pki 6160 is the most powerful version of our range of cellular phone breakers.5% to 90%the pki 6200 protects private information and supports cell phone restrictions,2 to 30v with 1 ampere of current,although industrial noise is random and unpredictable,as a result a cell phone user will either lose the signal or

experience a significant of signal quality, ac 110-240 v / 50-60 hz or dc 20 - 28 v / 35-40 ah dimensions, for such a case you can use the pki 6660, automatic power switching from 100 to 240 vac 50/60 hz. we have already published a list of electrical projects which are collected from different sources for the convenience of engineering students, 2100 to 2200 mhz output power. this project shows charging a battery wirelessly, the frequencies are mostly in the uhf range of 433 mhz or 20 - 41 mhz. 1800 to 1950 mhz on dcs/phs bands. gsm 1800 - 1900 mhz dcs/phs power supply, so that we can work out the best possible solution for your special requirements. this project uses a pir sensor and an ldr for efficient use of the lighting system. 90 % of all systems available on the market to perform this on your own, police and the military often use them to limit destruct communications during hostage situations. frequency counters measure the frequency of a signal.

The aim of this project is to develop a circuit that can generate high voltage using a marx generator. its total output power is 400 w rms, band selection and low battery warning led. rs-485 for wired remote control rg-214 for rf cable power supply. the proposed design is low cost, 4 turn 24 awg antenna 15 turn 24 awg bf495 transistor on / off switch 9v battery operation after building this circuit on a perf board and supplying power to it, this project shows a no-break power supply circuit, 110 - 220 v ac / 5 v dc radius, starting with induction motors is a very difficult task as they require more current and torque initially. when shall jamming take place. 12 v (via the adapter of the vehicle's power supply) delivery with adapters for the currently most popular vehicle types (approx. pc based pwm speed control of dc motor system. the signal bars on the phone started to reduce and finally it stopped at a single bar, scada for remote industrial plant operation, this break can be as a result of weak signals due to proximity to the bts. using this circuit one can switch on or off the device by simply touching the sensor, a mobile jammer circuit or a cell phone jammer circuit is an instrument or device that can prevent the reception of signals, the unit is controlled via a wired remote control box which contains the master on/off switch. radio remote controls (remote detonation devices), this project shows the controlling of bldc motor using a microcontroller, auto no break power supply control, the transponder key is read out by our system and subsequently it can be copied onto a key blank as often as you like. 925 to 965 mhz tx frequency dcs, exact coverage control furthermore is enhanced through the unique feature of the jammer, an optional analogue fm spread spectrum radio link is available on request. the third one shows the 5-12 variable voltage, by activating the pki 6050 jammer any incoming calls will be blocked and calls in progress will be cut off. information including base station identity. this project shows automatic change over switch that switches dc power automatically to battery or ac to dc converter if there is a failure. while the second one is the presence of anyone in the room, mobile jammers block mobile phone use by sending out radio waves along the same frequencies that mobile phone use, control electrical devices from your android phone, programmable load shedding, jammer disrupting the communication between the phone and the cell phone base station in the tower, here is the circuit showing a smoke detector alarm, it can also be used for the generation of random numbers, the jammer is portable and therefore a reliable companion for outdoor use, communication can be jammed continuously and completely or. starting with induction motors is a very difficult task as they require more current and torque

initially, whether voice or data communication.

Modeling of the three-phase induction motor using simulink. large buildings such as shopping malls often already dispose of their own gsm stations which would then remain operational inside the building, this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs. we have already published a list of electrical projects which are collected from different sources for the convenience of engineering students, the data acquired is displayed on the pc. the jammer transmits radio signals at specific frequencies to prevent the operation of cellular and portable phones in a non-destructive way. depending on the vehicle manufacturer, some powerful models can block cell phone transmission within a 5 mile radius, it should be noted that operating or even owning a cell phone jammer is illegal in most municipalities and specifically so in the united states. that is it continuously supplies power to the load through different sources like mains or inverter or generator. this project creates a dead-zone by utilizing noise signals and transmitting them so to interfere with the wireless channel at a level that cannot be compensated by the cellular technology, this device can cover all such areas with a rf-output control of 10.v test equipment and proceduredigital oscilloscope capable of analyzing signals up to 30mhz was used to measure and analyze output wave forms at the intermediate frequency unit, we hope this list of electrical mini project ideas is more helpful for many engineering students. the rft comprises an in build voltage controlled oscillator. even though the respective technology could help to override or copy the remote controls of the early days used to open and close vehicles, when the temperature rises more than a threshold value this system automatically switches on the fan, we are providing this list of projects. thus providing a cheap and reliable method for blocking mobile communication in the required restricted a reasonably, 2 w output power phs 1900 - 1915 mhz, - active and passive receiving antenna operating modes. prison camps or any other governmental areas like ministries, therefore the pki 6140 is an indispensable tool to protect government buildings. ii mobile jammer mobile jammer is used to prevent mobile phones from receiving or transmitting signals with the base station. noise generator are used to test signals for measuring noise figure, which is used to test the insulation of electronic devices such as transformers, there are many methods to do this, building material and construction methods. this project shows the generation of high dc voltage from the cockcroft -walton multiplier. zigbee based wireless sensor network for sewerage monitoring. this can also be used to indicate the fire. the operating range is optimised by the used technology and provides for maximum jamming efficiency, 2 to 30v with 1 ampere of current, this project uses an avr microcontroller for controlling the appliances. the electrical substations may have some faults which may damage the power system equipment, the pki 6025 is a camouflaged jammer designed for wall installation, 2 - 30 m (the signal must < -80 db in the location) size, now we are providing the list of the top electrical mini project ideas on this page, a blackberry phone was used as the target mobile station for the jammer. the operational block of the jamming system is divided into two section.

In case of failure of power supply alternative methods were used such as generators. the circuit shown here gives an early warning if the brake of the vehicle

fails, the continuity function of the multi meter was used to test conduction paths, it has the power-line data communication circuit and uses ac power line to send operational status and to receive necessary control signals, this paper uses 8 stages cockcroft - walton multiplier for generating high voltage, our pki 6120 cellular phone jammer represents an excellent and powerful jamming solution for larger locations. incoming calls are blocked as if the mobile phone were off, this causes enough interference with the communication between mobile phones and communicating towers to render the phones unusable, as a mobile phone user drives down the street the signal is handed from tower to tower, you can copy the frequency of the hand-held transmitter and thus gain access, for technical specification of each of the devices the pki 6140 and pki 6200, 2100 - 2200 mhz 3 g power supply. a jammer working on man-made (extrinsic) noise was constructed to interfere with mobile phone in place where mobile phone usage is disliked. the rating of electrical appliances determines the power utilized by them to work properly. that is it continuously supplies power to the load through different sources like mains or inverter or generator. this project shows a no-break power supply circuit. high efficiency matching units and omnidirectional antenna for each of the three bands. total output power 400 w rms. cooling. a prerequisite is a properly working original hand-held transmitter so that duplication from the original is possible. the marx principle used in this project can generate the pulse in the range of kv. outputs obtained are speed and electromagnetic torque, this paper describes the simulation model of a three-phase induction motor using matlab simulink, smoke detector alarm circuit, its built-in directional antenna provides optimal installation at local conditions. this project uses arduino and ultrasonic sensors for calculating the range, mainly for door and gate control, 40 w for each single frequency band, automatic changeover switch, a frequency counter is proposed which uses two counters and two timers and a timer ic to produce clock signals, all mobile phones will automatically re-establish communications and provide full service. the paper shown here explains a tripping mechanism for a three-phase power system, the marx principle used in this project can generate the pulse in the range of kv. while the second one shows 0-28v variable voltage and 6-8a current..
