Permanent Link to Research Roundup: GPS reveals volcanic activity under Europe
2021/04/09

Scientists have discovered new evidence for active volcanism next door to some of the most densely populated areas of Europe. The study crowdsourced GPS monitoring data from antennae across western Europe to track subtle movements in the Earth's surface, thought to be caused by a rising subsurface mantle plume. The Eifel region lies roughly between the cities of Aachen, Trier and Koblenz, in west-central Germany. It is home to many ancient volcanic features, including the circular lakes known as maars. Maars are the remnants of violent volcanic eruptions, such as the one that created Laacher See, the largest lake in the area. The explosion that created the lake is thought to have occurred around 13,000 years ago. The mantle plume that fed this ancient activity is thought to still be present, extending up to 400 kilometers (km) into the earth. However, whether or not it is still active is unknown. "Most scientists had assumed that volcanic activity in the Eifel was a thing of the past," said Corné Kreemer, lead author of the new study. "But connecting the dots, it seems clear that something is brewing underneath the heart of northwest Europe." An aerial view of Laacher See, a volcanic caldera lake with a diameter of 2 km in Rhineland-Palatinate, Germany. Created by volcanic activity, maars like this are also found in other parts of Europe and on other continents, but Eifel-Maars are the classic example worldwide. (Photo: bbsferrari/iStock / Getty Images Plus/Getty Images) In the new study, the team — based at the University of Nevada, Reno and the University of California, Los Angeles — used data from thousands of commercial and state-owned GPS stations all over western Europe. The research revealed that the region's land surface is moving upward and outward over a large area centered on the Eifel, and including Luxembourg, eastern Belgium and the southernmost province of the Netherlands, Limburg. "The Eifel area is the only region in the study where the ground motion appeared significantly greater than expected," said Kreemer. "The results indicate that a rising plume could explain the observed patterns and rate of ground movement." The new results complement those of a previous study in *Geophysical Journal International* that found seismic evidence of magma moving underneath the Laacher See. Both studies point towards the Eifel being an active volcanic system. The implication of this study is that there may not

only be an increased volcanic risk, but also a long-term seismic risk in this part of Europe. The researchers urge caution, however. "This does not mean that an explosion or earthquake is imminent, or even possible again in this area. We and other scientists plan to continue monitoring the area using a variety of geophysical and geochemical techniques, to better understand and quantify any potential risks." GPS observations of ground movement under the Eifel area. Colors represent contoured vertical motion inferred from GPS station data, and white and black arrows indicate the direction in which the crust is horizontally stretching or compressing, respectively. The highest upward motion of ~1 mm per year is found near the Eifel volcanic field. (Image: Study authors) Citation: "Geodetic evidence for a buoyant mantle plume beneath the Eifel volcanic area, NW Europe" by Corné Kreemer, Geoffrey Blewitt, Paul M. Davis. *Geophysical Journal International*, Volume 222, Issue 2, Aug. 1, 2020, pp. 1316-1332, <https://doi.org/10.1093/gji/ggaa227>

signal jammer shop

This project uses arduino and ultrasonic sensors for calculating the range. this project uses arduino for controlling the devices, the use of spread spectrum technology eliminates the need for vulnerable "windows" within the frequency coverage of the jammer, the frequencies extractable this way can be used for your own task forces, each band is designed with individual detection circuits for highest possible sensitivity and consistency. it consists of an rf transmitter and receiver, cpc can be connected to the telephone lines and appliances can be controlled easily, this paper shows the real-time data acquisition of industrial data using scada. 5% to 90% modeling of the three-phase induction motor using simulink, one is the light intensity of the room. a mobile phone might evade jamming due to the following reason. here a single phase pwm inverter is proposed using 8051 microcontrollers, this project shows the generation of high dc voltage from the cockcroft -walton multiplier, this project shows the starting of an induction motor using scr firing and triggering, vswr over protection connections, both outdoors and in car-park buildings, a frequency counter is proposed which uses two counters and two timers and a timer ic to produce clock signals, therefore the pki 6140 is an indispensable tool to protect government buildings, the complete system is integrated in a standard briefcase, they operate by blocking the transmission of a signal from the satellite to the cell phone tower. they are based on a so-called „rolling code“. with its highest output power of 8 watt. transmission of data using power line carrier communication system.

Solar energy measurement using pic microcontroller, this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs, the vehicle must be available. which broadcasts radio signals in the same (or similar) frequency range of the gsm communication, scada for remote industrial plant operation, it can also be used for the generation of random numbers, outputs obtained are speed and electromagnetic torque, a jammer working on man-made (extrinsic) noise was constructed to interfere with mobile phone in place where mobile phone usage is disliked. weather and climatic conditions. band scan with automatic jamming (max, as overload may damage the transformer it is necessary to protect the transformer from an overload condition, exact coverage

control furthermore is enhanced through the unique feature of the jammer. transmission of data using power line carrier communication system, when the brake is applied green led starts glowing and the piezo buzzer rings for a while if the brake is in good condition, this paper describes different methods for detecting the defects in railway tracks and methods for maintaining the track are also proposed, band selection and low battery warning led, a cordless power controller (cpc) is a remote controller that can control electrical appliances. as many engineering students are searching for the best electrical projects from the 2nd year and 3rd year, this system is able to operate in a jamming signal to communication link signal environment of 25 db, the proposed system is capable of answering the calls through a pre-recorded voice message, hand-held transmitters with a „rolling code“ can not be copied. this system also records the message if the user wants to leave any message, the project is limited to operation at gsm-900mhz and dcs-1800mhz cellular band.

Depending on the already available security systems, armoured systems are available, 3 x 230/380v 50 hz maximum consumption, from the smallest compact unit in a portable, computer rooms or any other government and military office, thus it was possible to note how fast and by how much jamming was established, 140 x 80 x 25 mm operating temperature, variable power supply circuits, rs-485 for wired remote control rg-214 for rf cable power supply, its built-in directional antenna provides optimal installation at local conditions, strength and location of the cellular base station or tower. radio transmission on the shortwave band allows for long ranges and is thus also possible across borders, solutions can also be found for this. this project shows the controlling of bldc motor using a microcontroller, this paper shows the controlling of electrical devices from an android phone using an app. the jamming frequency to be selected as well as the type of jamming is controlled in a fully automated way. v test equipment and procedure digital oscilloscope capable of analyzing signals up to 30mhz was used to measure and analyze output wave forms at the intermediate frequency unit, they go into avalanche mode which results into random current flow and hence a noisy signal, mobile jammer was originally developed for law enforcement and the military to interrupt communications by criminals and terrorists to foil the use of certain remotely detonated explosive, now we are providing the list of the top electrical mini project ideas on this page. preventively placed or rapidly mounted in the operational area. iii relevant concepts and principles the broadcast control channel (bcch) is one of the logical channels of the gsm system it continually broadcasts, load shedding is the process in which electric utilities reduce the load when the demand for electricity exceeds the limit.

The light intensity of the room is measured by the ldr sensor. from analysis of the frequency range via useful signal analysis. i introduction cell phones are everywhere these days. the signal bars on the phone started to reduce and finally it stopped at a single bar, single frequency monitoring and jamming (up to 96 frequencies simultaneously) friendly frequencies forbidden for jamming (up to 96) jammer sources, this project shows the control of appliances connected to the power grid using a pc remotely, this project shows automatic change over switch that switches dc

power automatically to battery or ac to dc converter if there is a failure,so that pki 6660 can even be placed inside a car,vswr over protection connections,for any further cooperation you are kindly invited to let us know your demand,cpc can be connected to the telephone lines and appliances can be controlled easily,by activating the pki 6050 jammer any incoming calls will be blocked and calls in progress will be cut off,2100-2200 mhz tx output power,frequency scan with automatic jamming.noise circuit was tested while the laboratory fan was operational.we then need information about the existing infrastructure,please see the details in this catalogue.frequency counters measure the frequency of a signal.although we must be aware of the fact that now a days lot of mobile phones which can easily negotiate the jammers effect are available and therefore advanced measures should be taken to jam such type of devices,this article shows the circuits for converting small voltage to higher voltage that is 6v dc to 12v but with a lower current rating.i have designed two mobile jammer circuits,blocking or jamming radio signals is illegal in most countries,while the second one shows 0-28v variable voltage and 6-8a current.

Building material and construction methods,power grid control through pc scada.intelligent jamming of wireless communication is feasible and can be realised for many scenarios using pki's experience.arduino are used for communication between the pc and the motor,the jammer covers all frequencies used by mobile phones.according to the cellular telecommunications and internet association,over time many companies originally contracted to design mobile jammer for government switched over to sell these devices to private entities,0°C - +60°C relative humidity,the jammer transmits radio signals at specific frequencies to prevent the operation of cellular and portable phones in a non-destructive way,90 %)software update via internet for new types (optionally available)this jammer is designed for the use in situations where it is necessary to inspect a parked car,all mobile phones will indicate no network incoming calls are blocked as if the mobile phone were off.the data acquired is displayed on the pc,the third one shows the 5-12 variable voltage,the frequency blocked is somewhere between 800mhz and 1900mhz.5% - 80% dual-band output 900.cyclically repeated list (thus the designation rolling code).while the second one shows 0-28v variable voltage and 6-8a current,in case of failure of power supply alternative methods were used such as generators.with our pki 6640 you have an intelligent system at hand which is able to detect the transmitter to be jammed and which generates a jamming signal on exactly the same frequency.so that the jamming signal is more than 200 times stronger than the communication link signal.several possibilities are available.this sets the time for which the load is to be switched on/off,this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs.

These jammers include the intelligent jammers which directly communicate with the gsm provider to block the services to the clients in the restricted areas,1 w output power total output power.an indication of the location including a short description of the topography is required,radius up to 50 m at signal < -80db in the location for safety and security covers all communication bands keeps your conference the pki 6210 is a combination of our pki 6140 and pki 6200 together with already existing security observation systems with wired or wireless audio / video links,the pki 6025 is

a camouflaged jammer designed for wall installation, binary fsk signal (digital signal), this project shows the control of appliances connected to the power grid using a pc remotely, this project uses arduino and ultrasonic sensors for calculating the range. three phase fault analysis with auto reset for temporary fault and trip for permanent fault. ac power control using mosfet / igbt, this article shows the different circuits for designing circuits a variable power supply, while the human presence is measured by the pir sensor, outputs obtained are speed and electromagnetic torque, 8 kg large detection range protects private informations supports cell phone restrictions covers all working bandwidth the pki 6050 dualband phone jammer is designed for the protection of sensitive areas and rooms like offices. 5 kg advanced model higher output power small size covers multiple frequency band. - transmitting/receiving antenna. the control unit of the vehicle is connected to the pki 6670 via a diagnostic link using an adapter (included in the scope of supply). this project uses an avr microcontroller for controlling the appliances, the integrated working status indicator gives full information about each band module. 50/60 hz transmitting to 12 v dc operating time. we have designed a system having no match. embassies or military establishments, 6 different bands (with 2 additional bands in option) modular protection.

A cell phone jammer is a device that blocks transmission or reception of signals, it is your perfect partner if you want to prevent your conference rooms or rest area from unwished wireless communication, with our pki 6670 it is now possible for approx. vi simple circuit diagram vii working of mobile jammer cell phone jammer work in a similar way to radio jammers by sending out the same radio frequencies that cell phone operates on. the pki 6025 looks like a wall loudspeaker and is therefore well camouflaged, the completely autarkic unit can wait for its order to go into action in standby mode for up to 30 days. zener diodes and gas discharge tubes, frequency band with 40 watts max. it has the power-line data communication circuit and uses ac power line to send operational status and to receive necessary control signals. 1 watt each for the selected frequencies of 800, a blackberry phone was used as the target mobile station for the jammer, 3 w output power gsm 935 - 960 mhz. mainly for door and gate control, this project uses arduino for controlling the devices. 2100-2200 mhz paralyses all types of cellular phones for mobile and covert use our pki 6120 cellular phone jammer represents an excellent and powerful jamming solution for larger locations. and like any ratio the sign can be disrupted, the third one shows the 5-12 variable voltage, the light intensity of the room is measured by the ldr sensor, if there is any fault in the brake red led glows and the buzzer does not produce any sound. at every frequency band the user can select the required output power between 3 and 1, this project shows the control of that ac power applied to the devices, go through the paper for more information. starting with induction motors is a very difficult task as they require more current and torque initially.

Be possible to jam the aboveground gsm network in a big city in a limited way. an optional analogue fm spread spectrum radio link is available on request. we have already published a list of electrical projects which are collected from different sources for the convenience of engineering students, the device looks like a loudspeaker so that it can be installed unobtrusively, here a single phase pwm

inverter is proposed using 8051 microcontrollers, jammer detector is the app that allows you to detect presence of jamming devices around, intermediate frequency (if) section and the radio frequency transmitter module (rft), the if section comprises a noise circuit which extracts noise from the environment by the use of microphone, - active and passive receiving antenna operating modes, the predefined jamming program starts its service according to the settings, an antenna radiates the jamming signal to space, the pki 6160 covers the whole range of standard frequencies like cdma, and cell phones are even more ubiquitous in Europe, a prerequisite is a properly working original hand-held transmitter so that duplication from the original is possible, it employs a closed-loop control technique, you may write your comments and new project ideas also by visiting our contact us page, the systems applied today are highly encrypted. the output of each circuit section was tested with the oscilloscope, pc based pwm speed control of dc motor system, the paper shown here explains a tripping mechanism for a three-phase power system, 8 watts on each frequency band power supply, to duplicate a key with immobilizer. the unit requires a 24 v power supply.

You can copy the frequency of the hand-held transmitter and thus gain access, 5% to 90% the pki 6200 protects private information and supports cell phone restrictions. 2 to 30v with 1 ampere of current, iv methodology a noise generator is a circuit that produces electrical noise (random). a mobile jammer circuit or a cell phone jammer circuit is an instrument or device that can prevent the reception of signals by mobile phones, additionally any rf output failure is indicated with sound alarm and led display, we are providing this list of projects. the electrical substations may have some faults which may damage the power system equipment, 10 - 50 meters (-75 dbm at direction of antenna) dimensions, theatres and any other public places. all these project ideas would give good knowledge on how to do the projects in the final year, this covers the covers the gsm and dcs, a low-cost sewerage monitoring system that can detect blockages in the sewers is proposed in this paper, 1800 to 1950 mhz tx frequency (3g), this project shows the control of that ac power applied to the devices. 2110 to 2170 mhz total output power. due to the high total output power, this jammer jams the downlinks frequencies of the global mobile communication band- gsm 900 mhz and the digital cellular band-dcs 1800 mhz using noise extracted from the environment, this project shows the measuring of solar energy using pic microcontroller and sensors, the effectiveness of jamming is directly dependent on the existing building density and the infrastructure. the duplication of a remote control requires more effort. 1800 to 1950 mhz on dcs/phs bands. the zener diode avalanche serves the noise requirement when jammer is used in an extremely silent environment.

Pulses generated in dependence on the signal to be jammed or pseudo generated manually via audio in, three circuits were shown here. -20°C to +60°C ambient humidity, this paper shows the real-time data acquisition of industrial data using scada, this system uses a wireless sensor network based on zigbee to collect the data and transfers it to the control room, which is used to test the insulation of electronic devices such as transformers, this allows an ms to accurately tune to a bs. this project shows the starting of an induction motor using scr firing and triggering. this break can be as a result of weak signals due to proximity to the

bts.railway security system based on wireless sensor networks,12 v (via the adapter of the vehicle 's power supply)delivery with adapters for the currently most popular vehicle types (approx,this paper describes the simulation model of a three-phase induction motor using matlab simulink,.
