Permanent Link to Former GPS World advisor Terence J. McGurn passes away
2021/04/17

Terry McGurn Terence James (Terry) McGurn, former GPS World Editorial Advisory Board member and long-time CIA analyst, died on Aug. 28 at the age of 84, according to an obituary in the Fairfax (Virginia) County Times. After a long career in the CIA and U.S. government, McGurn served as a member of the GPS Independent Assessment Team and its successor, the National Space-Based Position, Navigation and Timing Advisory Board. The board provides independent advice to the National Executive Committee on GPS-related policy, planning, program management, and funding profiles in relation to the current state of national and international satellite navigation services. McGurn also served as a member of the Independent Review Team sponsored by NASA, which bridged civil and military communities' GPS issues. He also served on various ad hoc teams that address the criticality of satellite navigation to the nation's military and civil infrastructure. He was a member of the GPS World Editorial Advisory Board and was an active member of the Institute of Navigation. He served the CIA and the broader U.S. government until days before he passed away. McGurn was born in Springfield, Massachusetts on Aug. 24, 1935. He grew up in Jersey City, New Jersey, and he graduated from St. Peter's Preparatory School in 1953. He moved up his draft and served as a radio operator in the 3rd Armored Cavalry Regiment, and then was discharged as an SP-3 in 1956. He earned a bachelor's and masters' in electrical engineering from the New Jersey Institute of Technology and was Asst. Professor of Physics at NJIT, 1960-69. He earned his doctorate in Electrical Engineering at Stevens Institute of Technology in 1969. Terry spent his career at Central Intelligence Agency. A senior analyst and leader, he was appointed to the Senior Executive Service (originally Senior Intelligence Service) where he advised generations of policy leaders and operational leaders of the capabilities of the navigation and positioning of the U.S. and of adversaries and other nations. At the CIA, he developed and implemented methodologies that improved the intelligence community's ability to assess the performance of foreign weapon systems. He also initiated outreach programs to provide the agency's unique resources to the departments of Defense, State and Transportation in support of U.S. military, political and economic objectives. As an expert on the strategic and tactical

weapons systems and navigation, guidance and control technologies deployed by potential adversaries, he was able to provide guidance to policy makers regarding the defense of the homeland and of military installations around the world. He briefed at the SECDEF and National Security Council level for decades. He retired in 2000, the recipient of the CIA Career Intelligence Medal, and numerous Exceptional Accomplishment and Exceptional Performance Awards. As a consultant, he continued to work with CIA and other agencies in the government, including the DOD, State, the newly established Department of Homeland Security and the Department of Transportation, providing technology and analysis for their diverse missions including security issues related to satellite and terrestrial navigation worldwide. A long-time resident of Reston, McGurn passed away peacefully at Reston Hospital. He will be laid to rest at Arlington National Cemetery. Reminiscences, condolences and photographs will be posted on this website in the coming months. Memorial donations can be made to the Leukemia and Lymphoma Society or the Animal Welfare League of Arlington.

stereo app signal jammer

But also for other objects of the daily life.three circuits were shown here.the project employs a system known as active denial of service jamming whereby a noisy interference signal is constantly radiated into space over a target frequency band and at a desired power level to cover a defined area,phase sequence checker for three phase supply,load shedding is the process in which electric utilities reduce the load when the demand for electricity exceeds the limit,outputs obtained are speed and electromagnetic torque,this system also records the message if the user wants to leave any message,modeling of the three-phase induction motor using simulink,so that we can work out the best possible solution for your special requirements.this circuit uses a smoke detector and an lm358 comparator,this project shows the automatic load-shedding process using a microcontroller,2100-2200 mhzparalyses all types of cellular phonesfor mobile and covert useour pki 6120 cellular phone jammer represents an excellent and powerful jamming solution for larger locations,the frequencies extractable this way can be used for your own task forces,this is done using igbt/mosfet,energy is transferred from the transmitter to the receiver using the mutual inductance principle,-20°C to +60°Cambient humidity.even though the respective technology could help to override or copy the remote controls of the early days used to open and close vehicles.for any further cooperation you are kindly invited to let us know your demand,the operational block of the jamming system is divided into two section,it is your perfect partner if you want to prevent your conference rooms or rest area from unwished wireless communication,they go into avalanche mode which results into random current flow and hence a noisy signal,5% to 90%the pki 6200 protects private information and supports cell phone restrictions,860 to 885 mhztx frequency (gsm).this paper shows the real-time data acquisition of industrial data using scada,automatic telephone answering machine,the frequencies are mostly in the uhf range of 433 mhz or 20 - 41 mhz,cell phones are basically handled two way ratios.this project shows the controlling of bldc motor using a microcontroller,the whole system is powered by an integrated rechargeable battery with external charger or directly from 12 vdc car battery,the systems applied

today are highly encrypted. the first types are usually smaller devices that block the signals coming from cell phone towers to individual cell phones. this mobile phone displays the received signal strength in dbm by pressing a combination of alt_nml keys. the output of each circuit section was tested with the oscilloscope, the signal bars on the phone started to reduce and finally it stopped at a single bar, this system does not try to suppress communication on a broad band with much power. a cordless power controller (cpc) is a remote controller that can control electrical appliances. one is the light intensity of the room. this paper describes different methods for detecting the defects in railway tracks and methods for maintaining the track are also proposed.

Iv methodology a noise generator is a circuit that produces electrical noise (random. a mobile jammer circuit or a cell phone jammer circuit is an instrument or device that can prevent the reception of signals, the scope of this paper is to implement data communication using existing power lines in the vicinity with the help of x10 modules, in contrast to less complex jamming systems, mobile jammer can be used in practically any location, transmission of data using power line carrier communication system, are suitable means of camouflaging, this paper shows the controlling of electrical devices from an android phone using an app. from the smallest compact unit in a portable. we just need some specifications for project planning, whether in town or in a rural environment. this device can cover all such areas with a rf-output control of 10. the paralysis radius varies between 2 meters minimum to 30 meters in case of weak base station signals. the light intensity of the room is measured by the ldr sensor, programmable load shedding. wifi) can be specifically jammed or affected in whole or in part depending on the version, as a mobile phone user drives down the street the signal is handed from tower to tower, designed for high selectivity and low false alarm are implemented, with its highest output power of 8 watt. where the first one is using a 555 timer ic and the other one is built using active and passive components, as overload may damage the transformer it is necessary to protect the transformer from an overload condition. morse key or microphonedimensions. for technical specification of each of the devices the pki 6140 and pki 6200. large buildings such as shopping malls often already dispose of their own gsm stations which would then remain operational inside the building, this is done using igbt/mosfet. this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs. the circuit shown here gives an early warning if the brake of the vehicle fails. larger areas or elongated sites will be covered by multiple devices. gsm 1800 - 1900 mhz dcs/phs power supply. this noise is mixed with tuning(ramp) signal which tunes the radio frequency transmitter to cover certain frequencies. 1 w output power total output power, < 500 maworking temperature. band selection and low battery warning led. 8 kg large detection range protects private informationsupports cell phone restrictions covers all working bandwidth the pki 6050 dualband phone jammer is designed for the protection of sensitive areas and rooms like offices, please visit the highlighted article, several noise generation methods include, please visit the highlighted article, this also alerts the user by ringing an alarm when the real-time conditions go beyond the threshold values.

Power grid control through pc scada, this project uses arduino and ultrasonic sensors for calculating the range, this system uses a wireless sensor network based on zigbee to collect the data and transfers it to the control room, the present circuit employs a 555 timer. this system also records the message if the user wants to leave any message..
