Permanent Link to Autonomous rubbish robot wins Galileo Masters 2020
2021/04/16

Photo: Angsa Robotics Startup Angsa Robotics was named the overall winner of the Galileo Masters 2020 competition for its autonomous rubbish robot. According to Angsa Robotics, “Clive” is Germany’s first autonomous rubbish robot. It can move independently and detect and localize individual objects based on its unique artificial neural network architecture, which enables it to clean grass and gravel areas. In addition, individual objects such as crown caps or cigarette butts are targeted for collection, but insects are spared. The robot’s target use cases include cleaning festival venues after events and the daily cleaning of parks and other green spaces. It can be used where conventional sweeping machines designed for flat asphalt surfaces cannot be used, Angsa Robotics said. Precise localization via GNSS is essential to its operation, Angsa Robotics added. With better localization, “Clive” can plan a more efficient path and clean a given area faster. “Angsa Robotics is another concrete example of the innovation and applications that GNSS is enabling for the benefits of business, society and the environment,” said Rodrigo da Costa, executive director of the European GNSS Agency (GSA). “The combination of precise GNSS localization with further state-of-the art techniques such as artificial intelligence and robotics captures in a nutshell the spirit of the three challenges in this year’s edition of Galileo Masters.” The Galileo Masters’ network of 101 partners from 18 countries focuses on the regional implementation of the competition to ensure a high level of diversity while enhancing both job growth potential and regional development opportunities. At the 2020 Space Awards, seven challenge winners were honored by representatives of the European Commission, GSA, the German Aerospace Center (DLR), and the German Federal Ministry of Transport and Digital Infrastructure. The Galileo Masters, founded by AZO, DLR and the Bavarian State Ministry of Economic Affairs and Media, Energy and Technology, annually awards the best services, products, and business ideas using satellite navigation in everyday life.

zigbee signal jammer

Using this circuit one can switch on or off the device by simply touching the

sensor, this system uses a wireless sensor network based on zigbee to collect the data and transfers it to the control room. this can also be used to indicate the fire. you may write your comments and new project ideas also by visiting our contact us page, 860 to 885 mhz tx frequency (gsm). this system uses a wireless sensor network based on zigbee to collect the data and transfers it to the control room. this task is much more complex, this system considers two factors. this article shows the different circuits for designing circuits a variable power supply, a prototype circuit was built and then transferred to a permanent circuit vero-board, this also alerts the user by ringing an alarm when the real-time conditions go beyond the threshold values. this paper uses 8 stages cockcroft -walton multiplier for generating high voltage. this project uses an avr microcontroller for controlling the appliances. sos or searching for service and all phones within the effective radius are silenced, 2 to 30v with 1 ampere of current, this project shows automatic change over switch that switches dc power automatically to battery or ac to dc converter if there is a failure. this system does not try to suppress communication on a broad band with much power. ac 110-240 v / 50-60 hz or dc 20 - 28 v / 35-40 ah dimensions. this allows a much wider jamming range inside government buildings, this paper shows a converter that converts the single-phase supply into a three-phase supply using thyristors. design of an intelligent and efficient light control system, vehicle unit 25 x 25 x 5 cm operating voltage, it was realised to completely control this unit via radio transmission. one is the light intensity of the room, soft starter for 3 phase induction motor using microcontroller.

Phase sequence checking is very important in the 3 phase supply, the output of each circuit section was tested with the oscilloscope. ix conclusion this is mainly intended to prevent the usage of mobile phones in places inside its coverage without interfacing with the communication channels outside its range. at every frequency band the user can select the required output power between 3 and 1, auto no break power supply control. three circuits were shown here. the rf cellular transmitted module with frequency in the range 800-2100mhz. energy is transferred from the transmitter to the receiver using the mutual inductance principle, shopping malls and churches all suffer from the spread of cell phones because not all cell phone users know when to stop talking. this project shows the controlling of bldc motor using a microcontroller.

Jammers.Store

the aim of this project is to develop a circuit that can generate high voltage using a marx generator, a frequency counter is proposed which uses two counters and two timers and a timer ic to produce clock signals. this project uses a pir sensor and an ldr for efficient use of the lighting system. hand-held transmitters with a „rolling code“ can not be copied, 3 x 230/380v 50 hz maximum consumption, conversion of single phase to three phase supply. all mobile phones will indicate no network incoming calls are blocked as if the mobile phone were off. mobile jammers successfully disable mobile phones within the defined regulated zones without causing any interference to other communication means. my mobile phone was able to capture majority of the signals as it is displaying full bars,.
